PharmaWater-Small Cities

The Associated Press

The Associated Press surveyed 52 small **water** providers that serve communities with populations generally around 25,000 -- one in each state, and two in Missouri and Texas.

All but one said their **drinking water** had not been screened for **pharmaceuticals**; officials in that community, Emporia, Kan., refused to answer AP's questions, citing post-9/11 security concerns. Here's the list of the 51 cities that told the AP its **drinking water** has not been tested.

Anniston, Ala.

Fairbanks, Alaska

Prescott, Ariz.

Jacksonville, Ark.

Santa Paula, Calif.

Grand Junction, Colo.
